

# IQ Water®

These results  
can be yours

## DAIRY COWS

- Better liver data
- Reducing the cell, bacteria and urea count
- Improvement of fat and protein values
- Less compound feet required
- Better milk performance
- Better reproductiveness
- Vigorous and more healthy animals
- Balanced herd

## AGRICULTURAL ANIMAL FARMING AND FATTENING

- Better feed utilization
- Higher daily growth index
  - Slaughter weight can be achieved faster
- Reduction of breeding process for up to 5 days
- Better balance of health
- Lower sensitivity in disease
  - Lower mortality rate
- Lower sensitivity for stress
- Better climate in the barn

## Effects of „IQ Water“

Due to small drops of IQ - Water it has the ability to sprinkle the animal food more efficient and inter-fuse the cell walls. There will be optimised nutritive substance in the cells and the result may be a **better feed utilization**.

At all waste and toxic substances can be transported at real by IQ - water out of the cells. This may **optimise the liver metabolism**, thereby release the organism, **consolidate the immune system** and **increase animal wellbeing**.

The ideal metabolism process will enable the animals to introduce the whole energy **into stable growth process**.

Because of the high water quality the livestock will drink more water by trend, that will **raise the performance** to produce more milk, meat, eggs even during heat waves.

AGRICULTURE

## IQ Water improves water!

Water to promote plant and animal health as well as hygienic improvements in farming.

## The essence of water

As ordinary as water will be for us as **mysterious** it is and still askin riddles to science.

Tapwater is covered with a lot of foreign substances (medicament, hormone, harmful substances, etc.), is through long standing in pipes clustered and can be called "dead water".

## The way nature does it

In the nature the cluster of the water will be broken up, crushed and structured by a process of turbulence. This turbulence is decomposing the big inactive and so called low-energy structure and turns it to small, high energetic animate structure.

## The way we do it

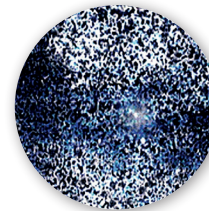

Many synchronised active principles are integrated in the „IQ Water“-System in fine adjustment according to the natural principles. These are for example intensive physical, pressure-suck areas, levitation etc.

## Cluster Refinement

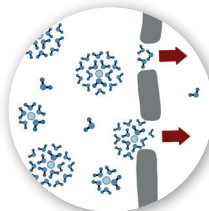

Via the fine balanced turbulence – processes the big molecular cluster structures will be broken up and refined.

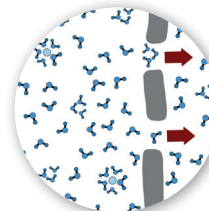

tap water

refined by IQ water

big clusters

small clusters

The small clusters make the water very cell-permeable and highly available to the organism.

## Cluster structure

Due to the water treatment by IQ-water the cluster structure becomes crystalline and natural again. Refined Water absorbs additives better than not refined water.

## These results can be yours

### MANURE / SLURRY

- Better slurry quality
- Less odour → more nitrogen content
- → increased fertiliser value
- More oxygen bubbles & slurry is more homogeneous
- Ammonia turns easily to nitrate
- Increased bioavailability → better nutrient uptake through the plants → more biomass

### PLANT PROTECTION

- Increased leaf wettening
- → Reduce of quantity of crop protection products
- → Higher effectivity of crop protection products
- Economy of crop protection products
- Robust, strong and resistant crop
- Increased plant growth
- Increased harvest results

## Some more benefits of IQ Water:

- Optimises water quality
- Reduces and remotes biofilm
- Optimises mixture with additives etc.
- Reduces cleaning intervals
- No service
- No electricity
